RAK WiFi Setup

Follow these steps to configure the RAK router over Wi-Fi.

1. Power On and Connect

- 1. Power on the router and wait for the LED to **pulse blue/green** (about 30 seconds to 1 minute).
- 2. On your PC, go to available Wi-Fi networks.
- 3. Find and connect to the router's Wi-Fi network.

2. Access Router Interface

- 1. Once connected, open a web browser and go to: https://192.168.230.1/
- 2. You may see a "Connection Not Private" warning:
 - 1. Click Advanced
 - 2. Click Proceed

3. Initial Configuration

- 1. On first connection, enter the password: MyFridgeRAK#1
- 2. When prompted, choose your region:
 - 1. South Africa
 - 2. **EU868**

4. Configure for Amazon LNS

- 1. On Amazon, register the router and download the certificates.
- 2. On the router:
 - 1. Set up Basics Station in LNS mode
 - 2. Upload and apply the certificates

5. Secure Network Settings

- 1. Navigate to **Network Settings > LAN**
- 2. Set a new **password** (use the same password as in Step 3)
- 3. The router will restart

6. Final Checks

- 1. Ensure Wi-Fi access is secured
- 2. Confirm the router is communicating with Amazon

7. Update Location Sheet

1. Record the updated device information in the location sheet
