Allocate Users Page

Overview

On the Allocate Users page, users within your company, and the device pools that have been assigned to them, will be displayed and can be interacted with. You can assign and remove device pools from users on this page.

Allocating A Device Pool

Device Pools can be allocated to a user by selecting the checkbox. This can also be done for multiple users. Doing so will cause the allocate device pool button to light up and show how many users are selected. Clicking on this will open the Allocate Users dialog.
