

Report Playback

Navigation

Report playback can be accessed from the Reports page.

Overview

Here you can playback a report for a specified date and time period. This allows you to use the current report configuration with your chosen date and time period.

Configuring A Report Playback

To do a playback, there are a few details that need to be set. First select either a Standard or Advanced Report. Then, select a date and time period. This will be the date and time period between which the report displays data. Frequency log determines the time interval (in minutes) that a point is

recorded on the report. The frequency log will default to the frequency log set in the selected report. However, this can be changed to fit your needs.
